

Setting the standard

Corintech and Di-Spark's Quality Management Systems (QMS) have been certified to AS9100 to meet the demanding requirements of the global aerospace industry.

As a supplier of complex electronic assemblies, Corintech achieved the certification with a score of 99.9%.

"This is an exceptional achievement and reflects not only the robustness of our QMS, but more importantly the skill, dedication and enthusiasm of the whole Corintech team," says Managing Director, Mike Barton.

Meanwhile, Di-Spark says AS9100 reflects the sophistication and continuous improvement of its QMS, to enable best practice in delivering real business benefits.

"Gaining AS9100 accreditation means we are well placed to capitalise on the SC21 aerospace initiative which will see this accreditation become a contractual requirement for suppliers and a discriminator in aerospace supplier selection," stated Di-Spark's Managing Director, David Light.
